

Security Audit of Vaulty a9943a by web3go.tech

Conclusion

Audit was done by the "Web3Go" team <https://web3go.tech/> (<https://web3go.tech/>) by Vladimir Smelov vladimirfol@gmail.com (<mailto:vladimirfol@gmail.com>).
<https://www.linkedin.com/in/vladimir-smelov-25021669/> (<https://www.linkedin.com/in/vladimir-smelov-25021669/>).

In the final contract were not found:

- Backdoors for investor funds withdrawal by anyone.
- Bugs allowing to steal money from the contract.
- Other security problems.

Obvious errors or backdoors were not found in the contract.
The client was acknowledged about all security notes below.

Scope

One specific update:

<https://github.com/VaultyFinance/contracts/commit/a9943a9732b09c41b4ec96326f1b920e23c4ac8a> (<https://github.com/VaultyFinance/contracts/commit/a9943a9732b09c41b4ec96326f1b920e23c4ac8a>).

The previous source code was already audited.

Methodology

1. Blind audit. Try to understand the structure of the code.
2. Find info in internet.
3. Ask questions to developers.
4. Draw the scheme of cross-contracts interactions.
5. Write user-stories, usage cases.
6. Run static analyzers

Find problems with:

- backdoors
- bugs
- math
- potential leaking of funds
- potential locking of the contract
- validate arguments and events
- others

Result

Critical

Not found.

Major

Comment

1. Useless conversion uint64 to/from uint256.

At:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L148>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L148>).
- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L222>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L222>).

there is a conversion of the periodIndex from uint64 to uint256 and then back to uint64.

Recommendation.

Remove useless conversion.

Status.

FIXED

2. Unclear setting daysClaimed to zero.

At:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L170>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L170>),
you set `claim.daysClaimed = 0`
but then at:
- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L220>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L220>),
you set it back to non-zero where `daysClaimed` is taken from:
- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L167>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L167>),

it's not clear why don't just set at:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L170>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L170>),

```
claim.daysClaimed = daysClaimed
```

Recommendation.

Add more explanations to the code about this logick block to make it absolutely clear what is going on inside.

Status.

NOT_ISSUE

3. Strange periodIndex decrement.

At:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L174>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L174>),
you do

periodIndex--;

so if someone call claimForSelf twice then at the second call, the while condition will be skipped at:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L152>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L152>),
and decreased periodIndex will be returned.

And at:

<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L222>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L222>)
you set periodIndex back to the past.

There is a check at:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L216>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L216>),
that should revert such transactions. But the check is not direct.

So it's possible that periodIndex goes back to the Past and this situation is reverted because the amount==0, so this is confusing.

Recommendation.

Add something like

```
require(totalPeriods > periodIndex);
```

or get rid of strange

```
periodIndex--;
```

you can use `for` -loop for example over `periodIndex`.

Status.

NOT_ISSUE

4. While condition potentially can go out of block gas limit.

At:

- <https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L152>
(<https://github.com/VaultyFinance/contracts/blob/a9943a9732b09c41b4ec96326f1b920e23c4ac8a/TokenVesting.sol#L152>).

if someone will call the method for the first time or after a long time the while condition potentially may process huge number of periods and go out of gas block limit.

Recommendation.

Create specific method to process specific number of periods to fit into gas block limit.

Status.
